

NGRok + Send JSON data from node.js server: student info

BY ADEBODUN ADELEYE 19747

TABLE OF CONTENT

- Step 1: Implement the task Send JSON data from node.js server: student info
- Step 2: Set up NGRok
- Step 3: Integrate the application Send JSON data from node.js server: student info and NGRok so that you can let anyone in the world access your application Send JSON data from node.js server: student info.

STEP 1

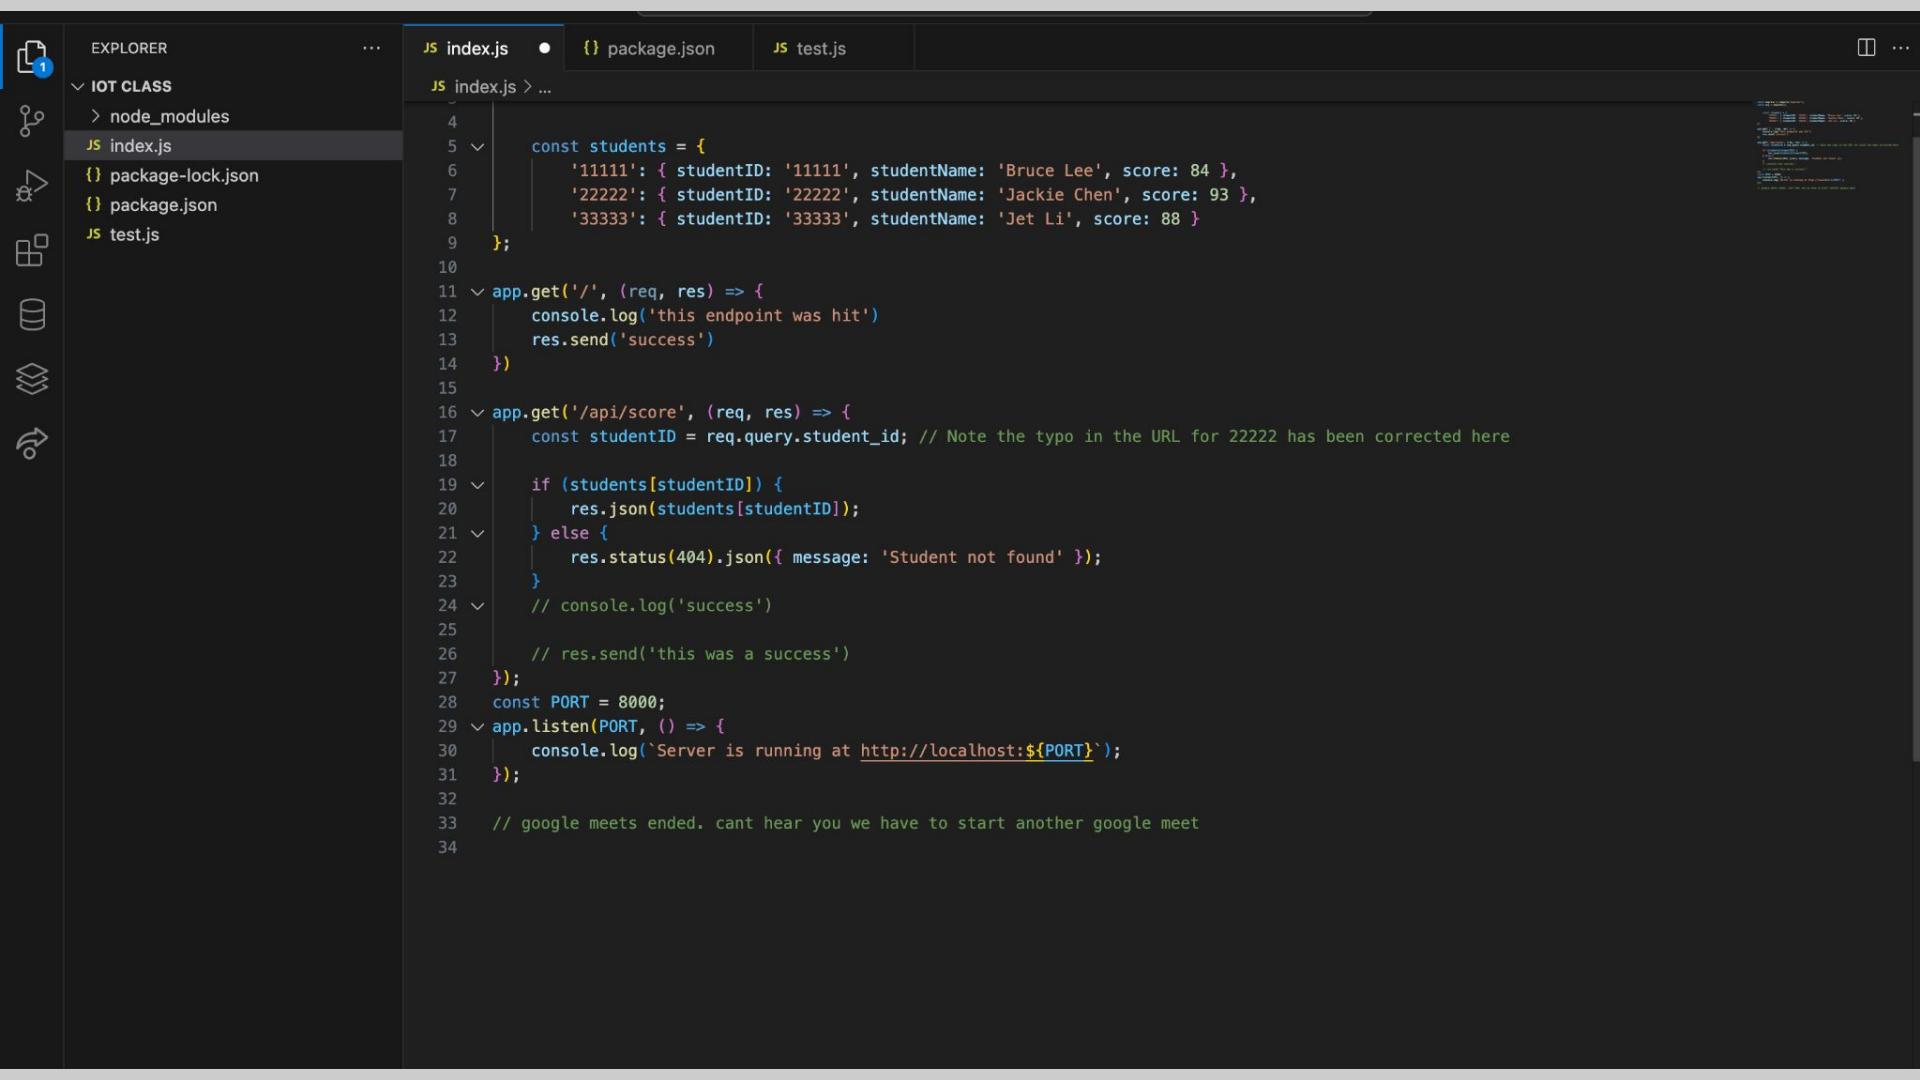

Create a Javascript to let a node.js server send the following data to the client.

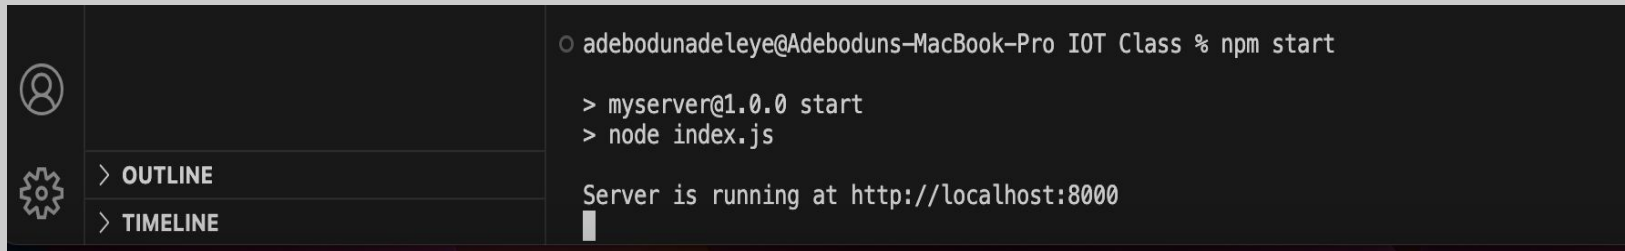

Student ID	Student Name	Score
11111	BruceLee	84
22222	Jackie Chen	93
33333	Jet Li	88

If the client types the following URL, then student ID 11111 data, including Student ID, Student Name, and Score, will be sent from the node.js server to the client:

`http://<server>:8000/api/score?student_id=11111`

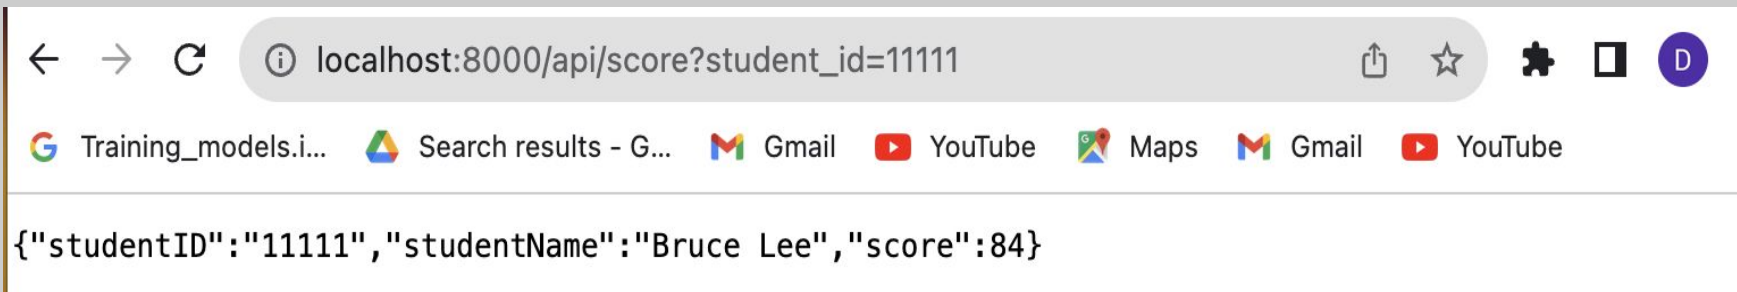

Checking if the server is running

A terminal window with a dark background. On the left, there is a sidebar with a user icon and a gear icon, with options for 'OUTLINE' and 'TIMELINE'. The main area shows a command prompt session where 'npm start' is run, followed by 'myserver@1.0.0 start' and 'node index.js'. The output indicates the server is running at 'http://localhost:8000'.

```
adebodunadeleye@Adeboduns-MacBook-Pro IOT Class % npm start  
  
> myserver@1.0.0 start  
> node index.js  
  
Server is running at http://localhost:8000
```

Result

STEP 2:

Set up NGRok

```
ngrok (Ctrl+C to quit)

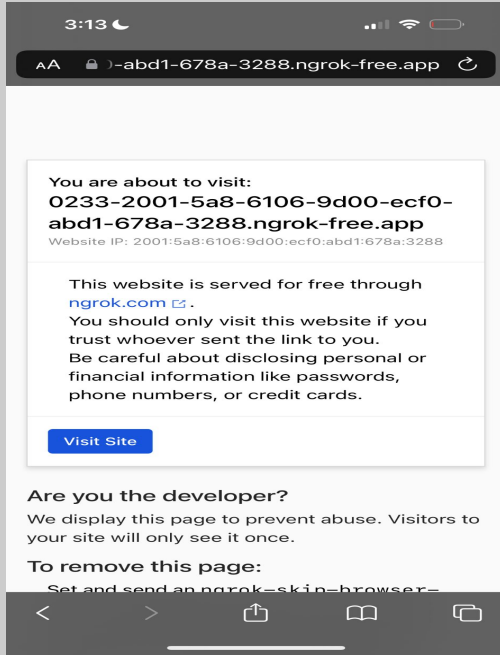

Introducing Always-On Global Server Load Balancer: https://ngrok.com/r/gslb

Session Status      online
Account             Adebodun Adeleye (Plan: Free)
Update              update available (version 3.3.5, Ctrl-U to update)
Version             3.3.4
Region              United States (California) (us-cal-1)
Latency              8ms
